

COMPARING CHEAP CANNABIS SEEDS

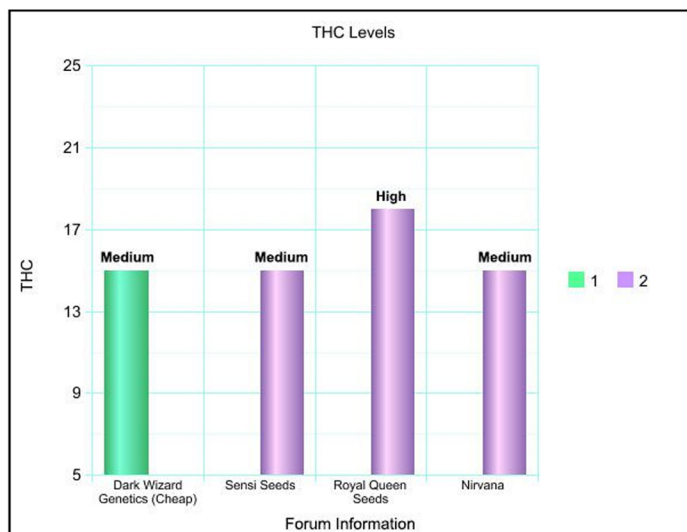

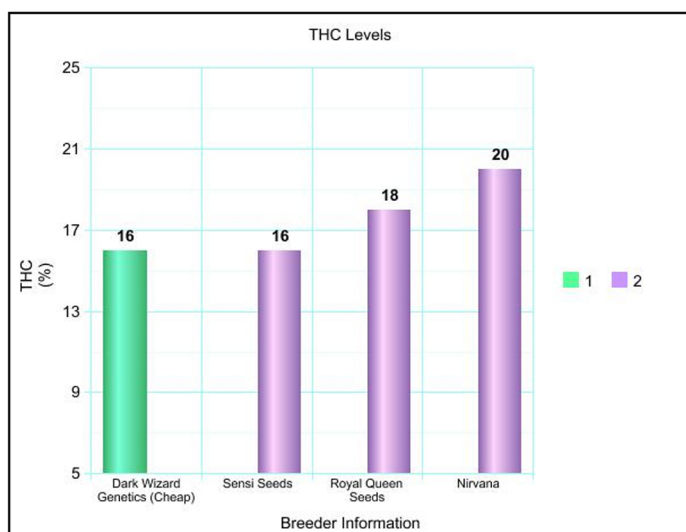

Comparing Yields of Cheap Cannabis Seeds vs Premium Brands

So here we have two graphs, most attention should be focused on 'forum information' as this is the yield reported by private growers; unlike the first graph which is the yield claimed by the breeder. Of course one private grower is not enough information to go on, so we have collected 3 separate grows from popular users from the following forums: [420Magazine](#), [THCTalk](#), and [Rollitup](#). We then calculated the average from a minimum of 3 different reports.

Comparing THC levels & Quality of Cheap Cannabis Seeds vs Premium Brands

There are at least 113 different cannabinoids found in cannabis so judging all of them would be very difficult, for this reason, we will focus on the well known THC compound - Now the issue here is that we can only take the breeders word on this as private growers are unable to find the true THC levels of their harvest. However, a lot of the time a clear picture of the buds will be a clear indication on the general level - We are going to categorize the forum graph as 'low, medium, and high' judging the bud through clear photographs. For this section, we are using 'smoke reports' from 8 different well-known forums as it is the only way to get feedback on the quality.

The data suggests that on the chosen strain we are comparing (Northern Lights), cheap cannabis seeds are right up there with the other well-known brands.
